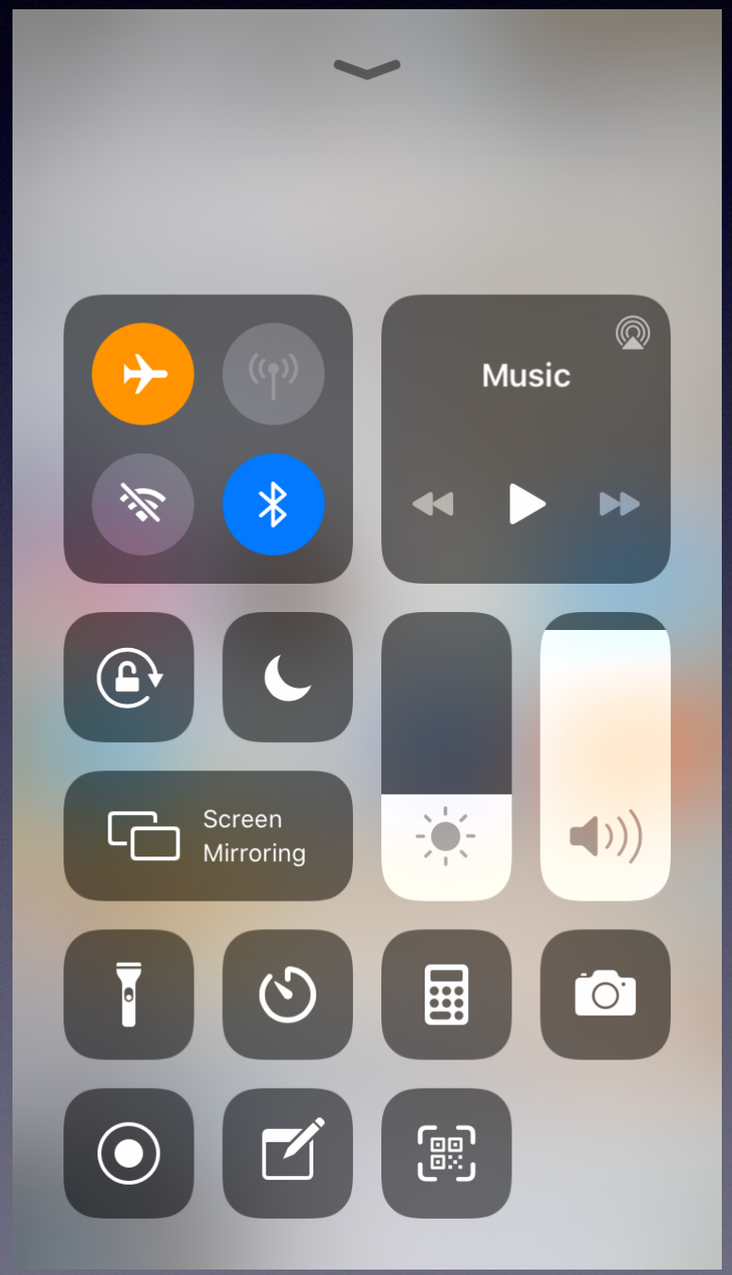
Video and sound recording

Video - before you start;

- Switch your phone to airplane mode
- Clean lens
- Check battery level
- Landscape (standard) or portrait
- Vlogging – normally uses front camera which isn't as good as back camera
- Lighting
- Plan, look and listen.



Stabilising and controlled movements

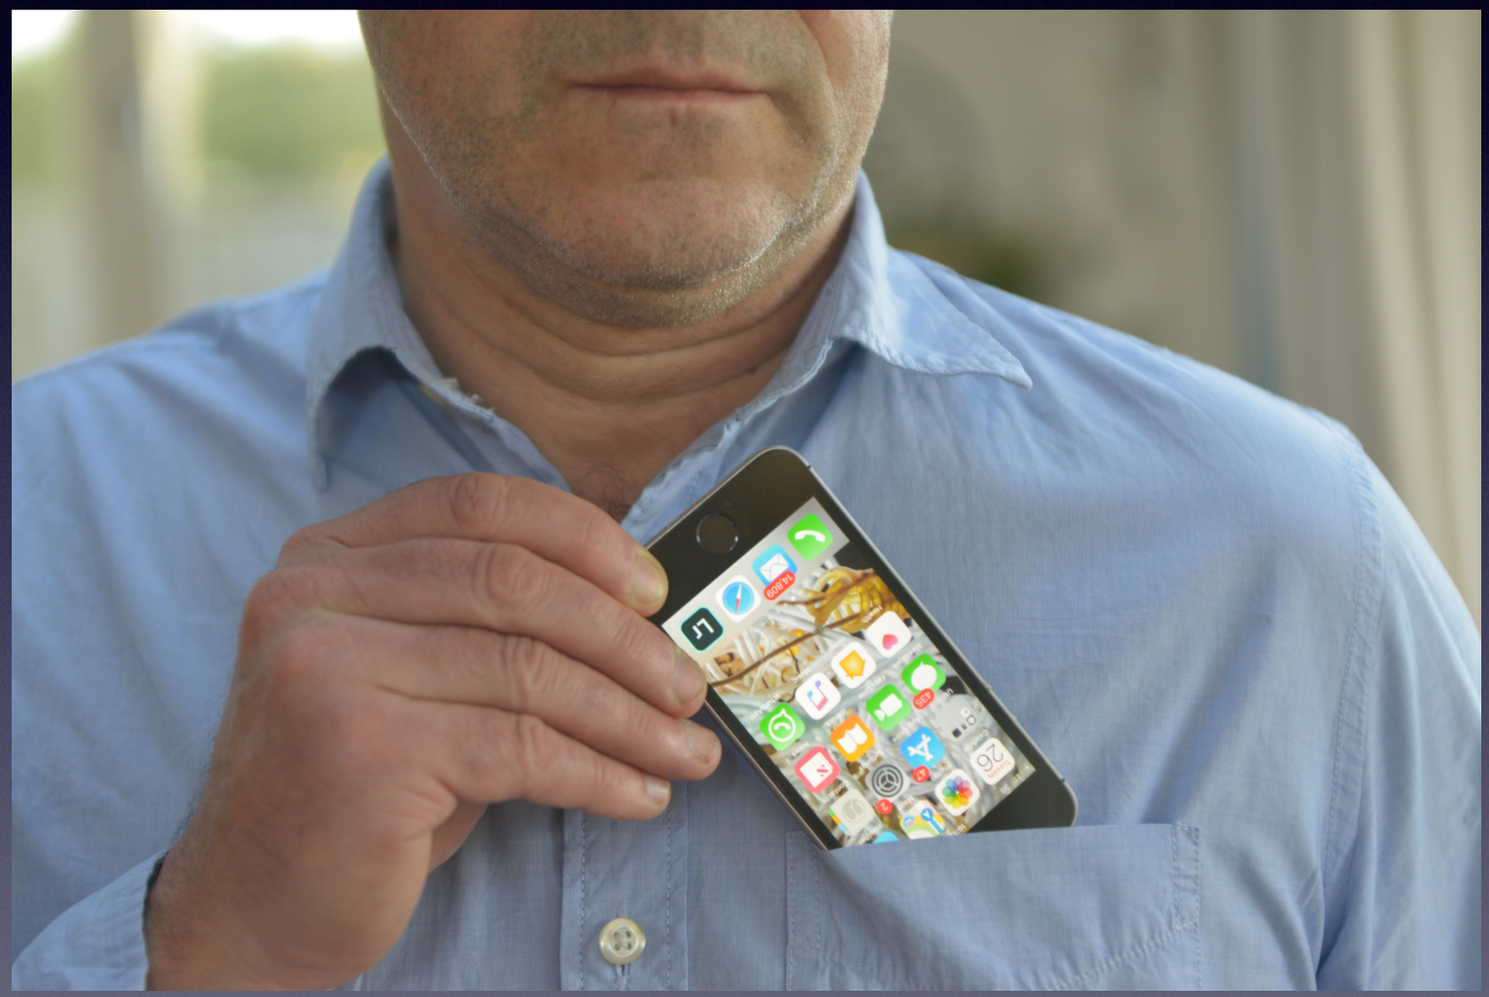
Sound advice

It is easier to watch a poor quality video with good quality sound than to watch a high quality video with poor quality sound.

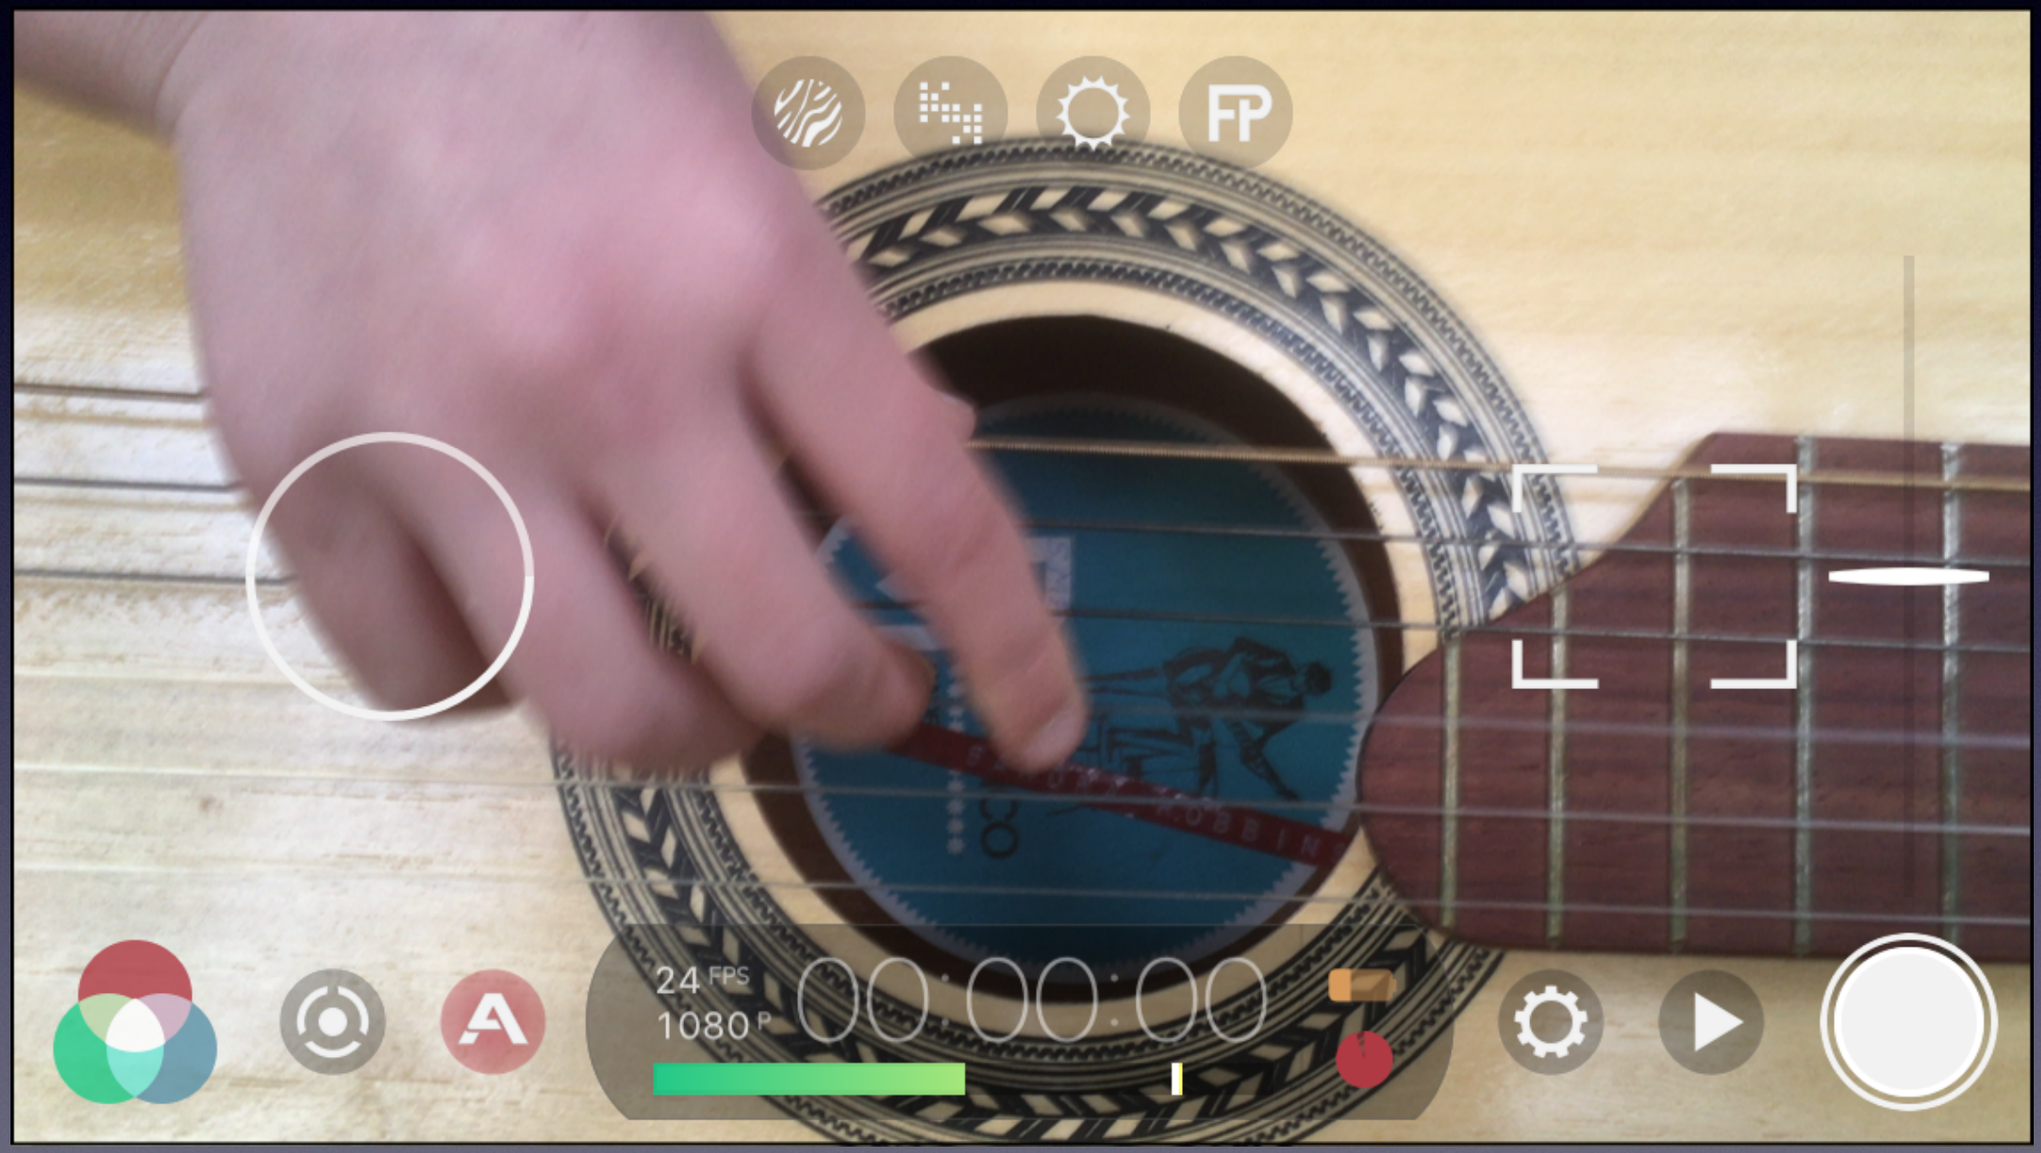
Using an old phone as a ‘plant’ mic



You will need to sync sound to video

For better quality use additional microphones

For best results, monitor sound recording



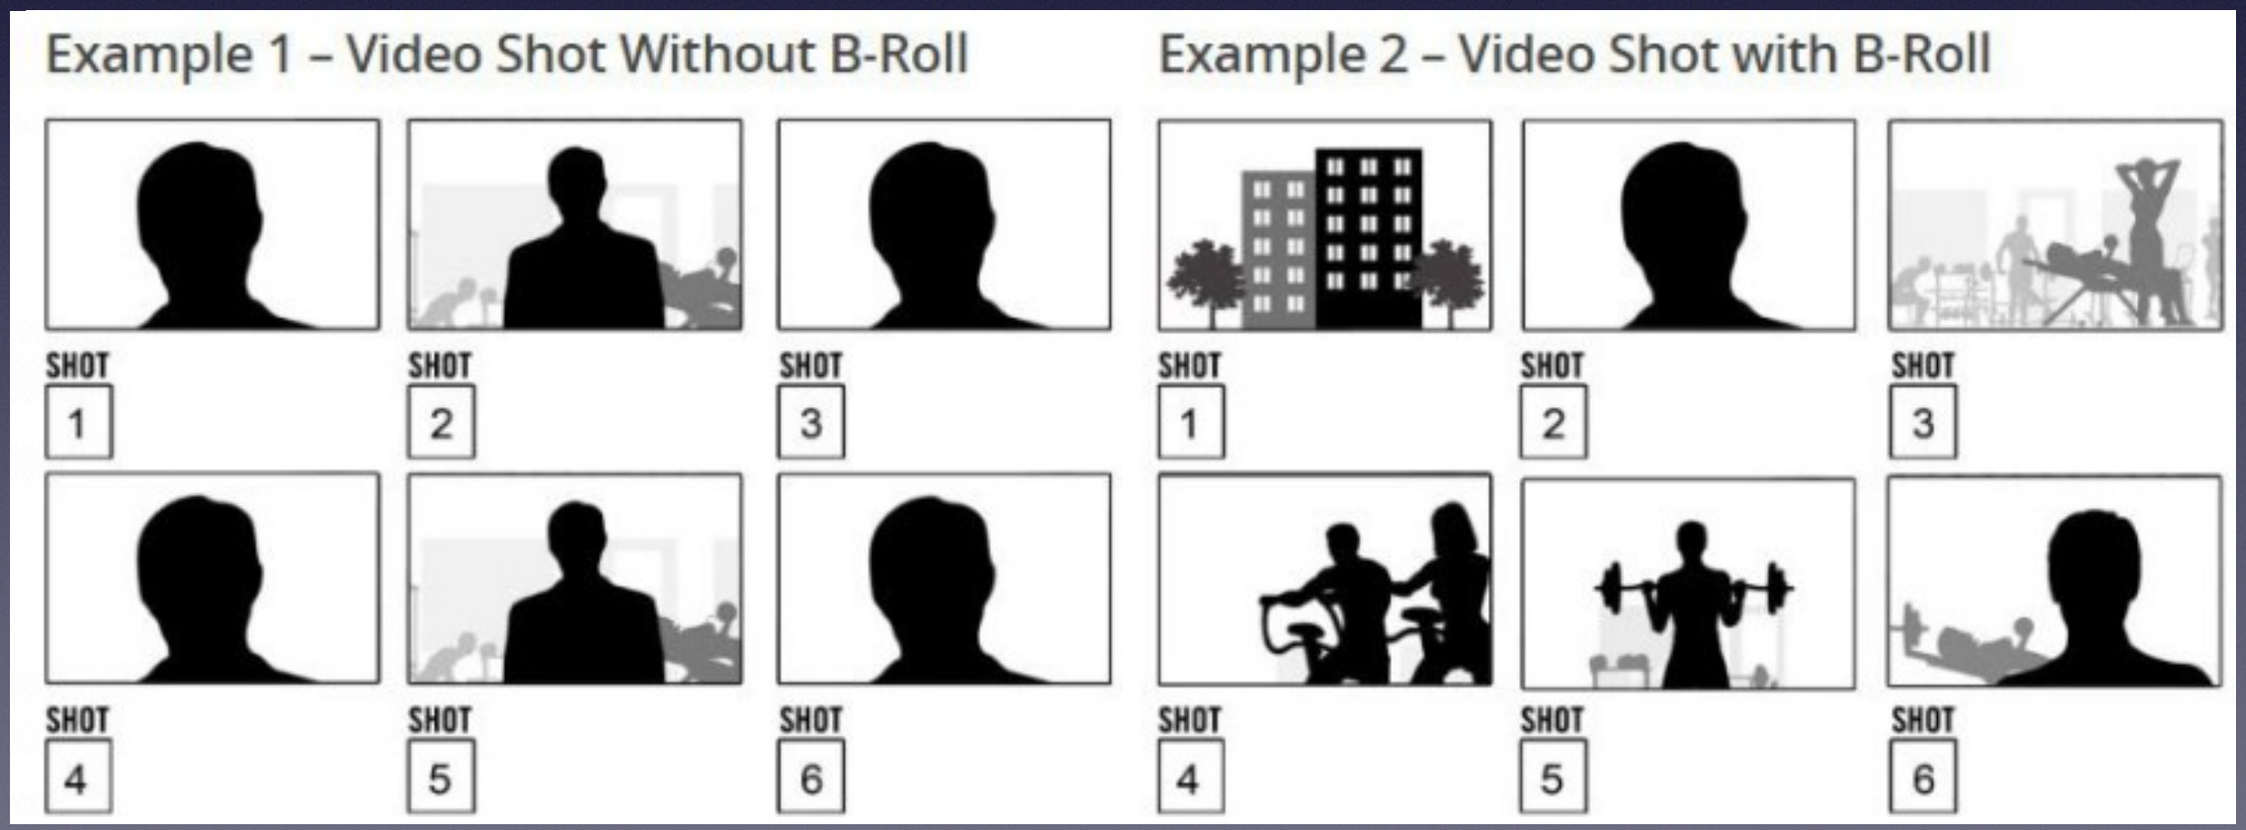
VU meter (Filmic Pro)

Synchronise sound to video

Plan your shots

Single shots of over 10 seconds can be boring for the viewer.

Try mixing with other clips to make your video more interesting. Try; detail shots, cut-aways, noddies, establishing shots, rack focus, second cameras (B-Roll) etc.



Special effects

Slow motion (high frame rate)

240 fps at 720P

Time Lapse

Apps that offer greater control

FilmicPro which is available for both iOS and Android phones offers professional level features such as audio monitoring (additional hardware required) zebra stripes, focus peaking.
